 $@2023, \mbox{ATESTEO GmbH}$ & Co. KG, This product data sheet was created on 03.28.2023.

Remarks and information

| Link no. | Торіс | Remark |
|----------|----------------------------|---|
| #1 | Nominal torque | Based on customer requests, the measurement systems can optionally be optimized for not listed nominal torque values (intermediate ranges possible). |
| #2 | Second torque range | The written second nominal torque value (Md _{ns}) is the smallest possible. Greater second torque ranges can be chosen on demand. Mechanical values and load limits vary between single and dual range torque meters. A data sheet for dual range torque meters with specific values can be requested. |
| #3 | Dimensions | Mechanical dimensions are without engagement. Use the drawings and step files as master for your constructions. |
| #4 | Detail in the drawings | Value can vary by optional components. Please find details to this attribute in the integrated drawings. |
| #5 | Pitch circle diameter | The pitch circle diameter is identically at input and output side for most systems. More information is given in the drawings of a product. |
| #6 | Linearity | Values of Linearity deviation incl. Hysteresis can only be reached if positive and negative sensitivity values are used. |
| #7 | Reference planes | Please check the drawings for information about the reference planes of this attribute. |
| #8 | Temperature range (rotor) | No condensation allowed. |
| #9 | Temperature range (stator) | No condensation allowed. Temperature related to housing ground point. |
| #10 | Load limits | The given values are only valid if no other load occurs at the same time. If the loads in sum are 100%, the max. error will be 0.3% of the nominal torque. |

 $@2023, \mbox{ATESTEO GmbH}$ & Co. KG, This product data sheet was created on 03.28.2023.

Remarks and information

| Link no. | Торіс | Remark |
|----------|---------------------------------------|--|
| #11 | Vibration limits | Vibration limits are not an influence to the machine. They reflect the allowed effect onto the rotor (ISO 7919-3). Parameter "n" is given in "r/min.". |
| #12 | Weights | Weights are related to components without options like speed detection system. Please contact us for exact weight information of options. |
| #13 | Flatness and concentricity tolerances | The parameters of "Flatness and concentricity tolerances rotor" are manufacturing tolerances. |
| #14 | Supply voltage | The supply voltage range must be given at measurement system side. Long wires can reduce the voltage level from power supply to measurement system. |
